Exam Cheating Detection System

Project Overview

Exam Cheating Detection uses the system to locate cheating in a school. With this system, teachers and school administrators can decide what kinds of cheating students are capable of, as well as how the school should go about finding it. They also decide who is responsible for cheating: students or staff. Administrators of a school also can determine how to set up and track system data about cheaters and examinations, based on the people whom they suspect cheated, they will make specific reports.

Problem Statement

Because if not properly controlled, it is difficult for professors to have a reliable way to keep tabs of all of their cheating violations or even catch repeat cheaters, let alone have accurate student records when professors throw out cheating paperwork because they have no place for it or, if they were organized enough, they could find. You would be better off with just one large database system to help keep it together nicely.

Project Objectives

The main objectives of this system are:

- Store student information.
- Store exam information.
- Record cheating incidents.
- Track types of cheating.
- Monitor repeated violations.
- Manage invigilators responsible for exam supervision.
- Generate reports about cheating cases.

System Users

The system will be used by the following users:

- **Administrator**
 1. Manages the database
 2. Adds exams, students, and invigilators
 3. Views reports
- **Instructor / Invigilator**
 1. Records cheating incidents
 2. Monitors students during exams

Main Entities (Database Tables)

The database will include the following tables:

1. Students
2. Instructors
3. Exams
4. Exam_Rooms
5. Invigilators
6. Cheating_Types
7. Cheating_Incidents
8. Violations
9. Penalties

Entity Description

Students : Stores information about students.

Attributes:

- Student_ID (PK)
- Student_Name
- Major
- Year_Level

Instructors : Stores instructor information.

Attributes:

- Instructor_ID (PK)
- Instructor_Name
- Department

Exams : Stores exam information.

Attributes:

- Exam_ID (PK)
- Course_Name
- Exam_Date
- Room_ID (FK)

Exam_Rooms: Stores exam room information.

Attributes:

- Room_ID (PK)
- Room_Name
- Capacity

Invigilators: Stores invigilators responsible for monitoring exams.

Attributes:

- Invigilator_ID (PK)
- Instructor_ID (FK)
- Exam_ID (FK)

Cheating_Types : Stores types of cheating.

Attributes:

- Type_ID (PK)
- Type_Name

Cheating_Incidents: Stores cheating cases.

Attributes:

- Incident_ID (PK)
- Student_ID (FK)
- Exam_ID (FK)
- Type_ID (FK)
- Incident_Date
- Description

Violations : Tracks number of violations for each student.

Attributes:

- Violation_ID (PK)
- Student_ID (FK)
- Incident_ID (FK)
- Violation_Count

Penalties: Stores penalties for cheating.

Attributes:

- Penalty_ID (PK)
- Violation_ID (FK)
- Penalty_Type
- Penalty_Date

Expected System Features

The system will support the following operations:

- Add new students
- Add exams
- Record cheating incidents
- Assign invigilators
- Track repeated violations
- Generate cheating reports
